

## **Integrated Pest Management**

Estimated time to complete: 25 min.

### **Course Description**

SafeColleges' *Integrated Pest Management* course is designed to familiarize staff members with the principles of an effective IPM program as well as the steps they can take to implement an IPM program on their campus. Pests and vermin are a constant threat in any building. At best, pests are upsetting and unsettling to see. At worst, they may also carry diseases. We can't make all pests go away, but we can keep pests under control and away from the most populated areas of our campuses with the use of an effective IPM program and strategies.

### **Common Themes**

This course reviews the following topics related to Integrated Pest Management:

- The definition of IPM
- The key principles of an IPM program
- IPM program essentials
- Managed treatments and tenets of IPM
- Campus staff's role in IPM

### **Authors**

Janet Hurley is the Program Specialist for the Southwest Technical Resource Center and Texas AgriLife Extension. She oversees the production of a bi-monthly newsletter, a website, and database of school IPM Coordinators. She is an approved trainer for school IPM Coordinators in Texas; co-chair of the Southern Region School IPM Workgroup; and sits on the National School IPM 2015 steering committee.

### **Training Environments**

*SafeColleges* is ideal for a blended learning environment, complementing in-service or video training, or as a stand-alone training course. The *SafeColleges* approach engages the learner in an e-learning environment while a Compliance Management System automatically tracks his/her progress through the courses. This assists the campus administrator or training coordinator in demonstrating compliance.
