

Respiratory Protection

Estimated time to complete: 20 min.

Course Description

Campus support staff personnel must occasionally work in surroundings where breathing hazards are present. Fumes, mists, gases, dust, and fibers are all types of respiratory hazards that can exist in campus environments. Thorough knowledge of respiratory protection is necessary if workers are to do their jobs safely and effectively. The goal of this course is to familiarize campus support staff members with the basics of protecting respiratory health through the proper use and maintenance of respirators.

Common Themes

- Identifying respiratory hazards on campuses
- OSHA regulations concerning respiratory protection
- Proper procedures for using respirators

Author

Jeremy Norton got his start in the safety business when he enlisted out of high school into the U.S. Navy. He became a nuclear engineer on the USS Carl Vinson, where he was responsible for the training and safety program for a nuclear power plant machinery room. After leaving the service, Jeremy ran safety and training programs for semiconductor manufacturer firms, and an international wind power utility. Jeremy has a Masters in Business Administrations and is currently the CEO of Affordable Safety Training LLC.

Training Environments

SafeColleges is ideal for a blended learning environment, complementing in-service or video training, or as a stand-alone training course. The *SafeColleges* approach engages the learner in an e-learning environment while a Compliance Management System automatically tracks his/her progress through the courses. This assists the district administrator or training coordinator in demonstrating compliance.
